

Web Final Report

By: Shahzaib Javed

My Website:

I wanted to make a website that told a story. The story is based on a decision tree and the story will change depending on the choices the user makes. The story is based on the popular TV show Arrow. I made up a story and present it through the website. The front end is coded in HTML, CSS and the web page is made to dynamically change using javascript and JQuery.

Decision Tree:

leave
 - ros will come from back and trap you and you will die
 soothng ending

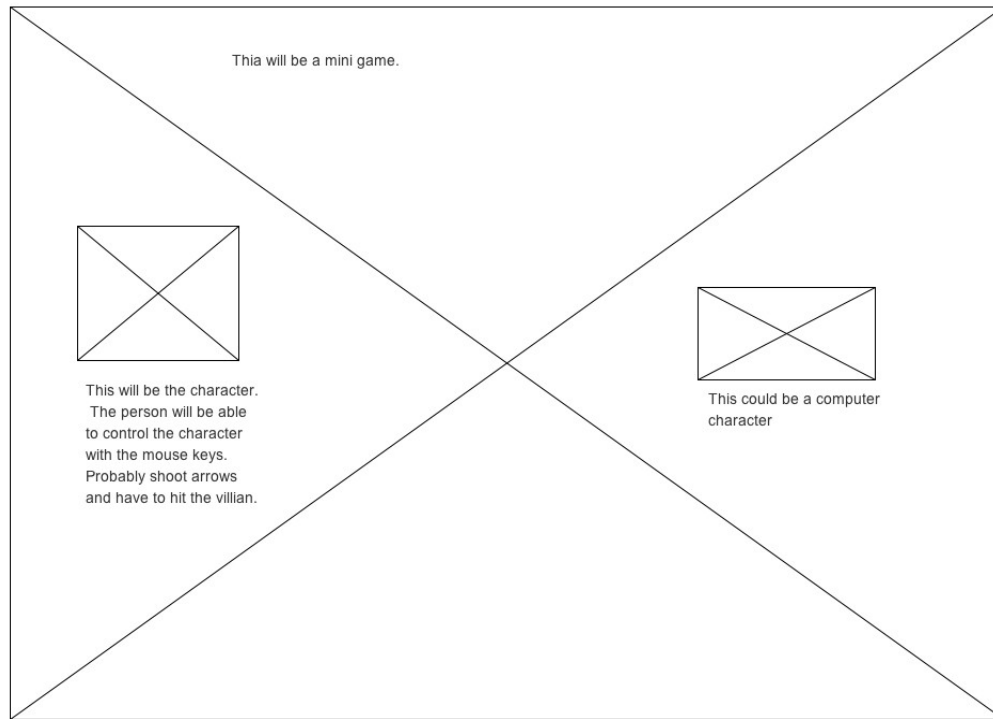

Not leave
 - fight ros
 - both survive and break out b/c of explosion
 - meet again

kill alone
 yes / no
 - end arrow's life
 - braky ending
 - enter him with mind control
 - forgive/love makes us be decent
 - go hit laluj & Duggle
 - arrow comes in last & takes everyone out.

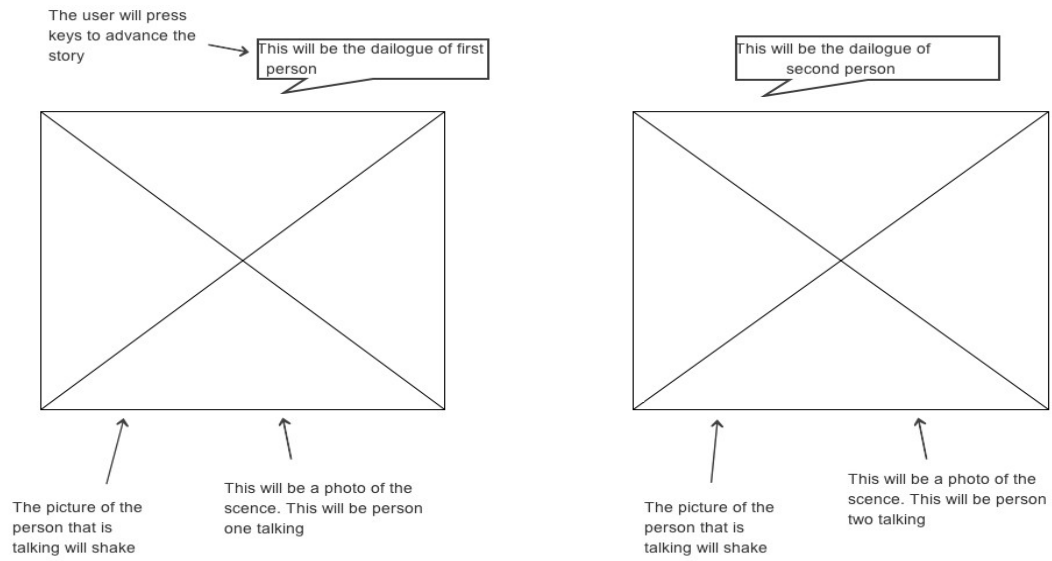

Call for help
 no / yes
 - arrow goes to fight
 - ros but dies
 - explosion?
 - call flat
 - they start fighting
 - arrow goes to building
 - arrow kills
 yes / no
 d.e / take out arrow

call help
 no / yes
 - they all die
 - arrow is under ros control?
 - call flash
 - fight in fair
 - arrow has both Duggle & laluj on both sides

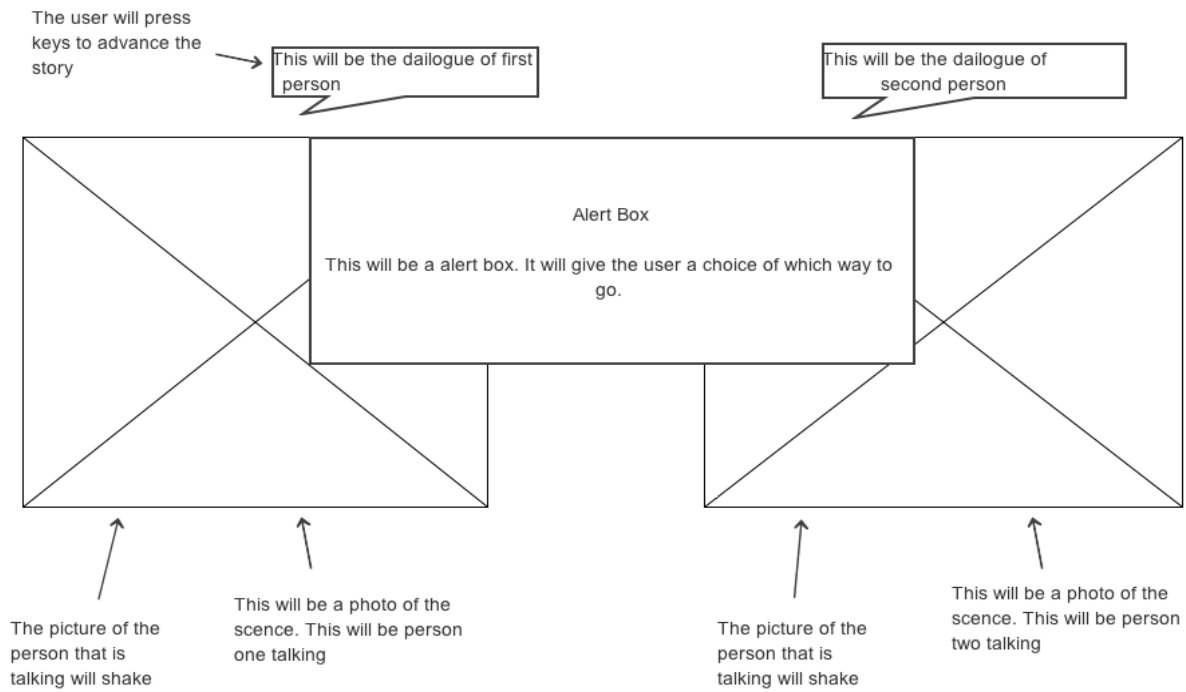

Save both we can't save
 Duggle / laluj
 - laluj dies
 - arrow gets taken out
 Choice
 what to do
 go / save
 - laluj dies
 - trap
 - Duggle dies
 - laluj dies
 - arrow taken out

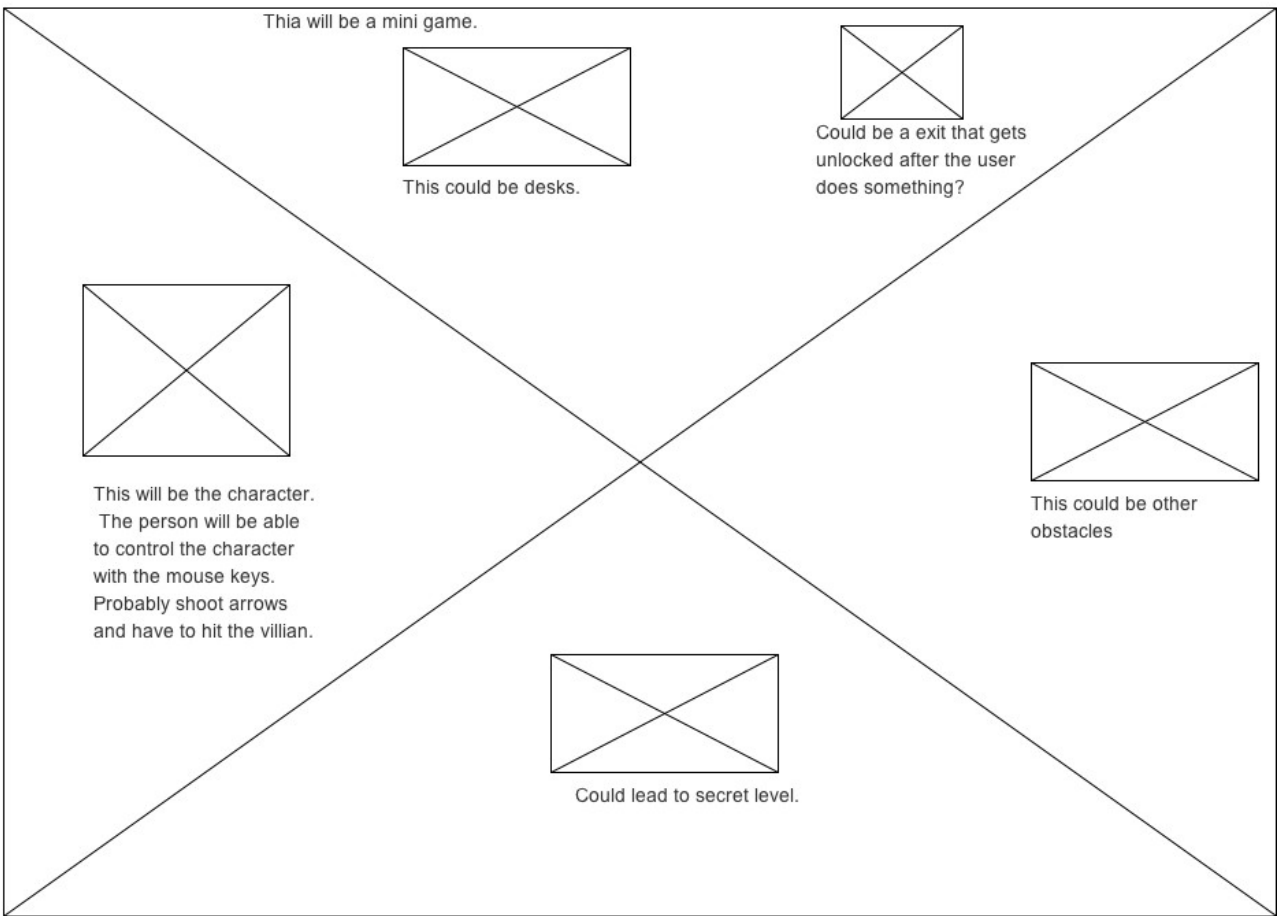

Frame 1: This is the first page that will be displayed. Basically there will be two images which will display the character.

Frame 2: When the user clicks a button or a key, the dialogue will be display. It will pop up.

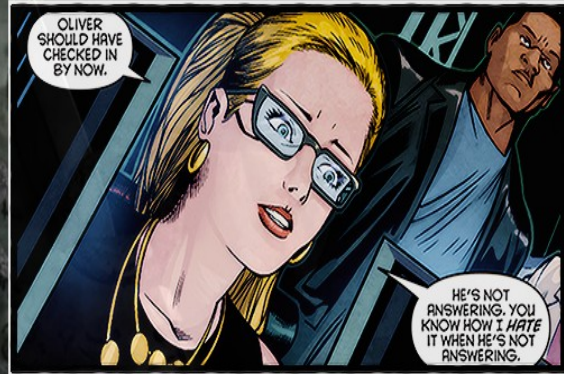

Frame 3: When a decision is presented, a alert box will appear giving the user an option.

Frame 4: This is a mini game the user plays . However, this was omitted due to time constraints.

Arrow: I'm flattered. But that doesn't keep the scums of the street.

Dialogue Box appearing

What will you do ?

Knock out the
robber?

Listen to the
robber?

Decision making
